Project description

Goal:

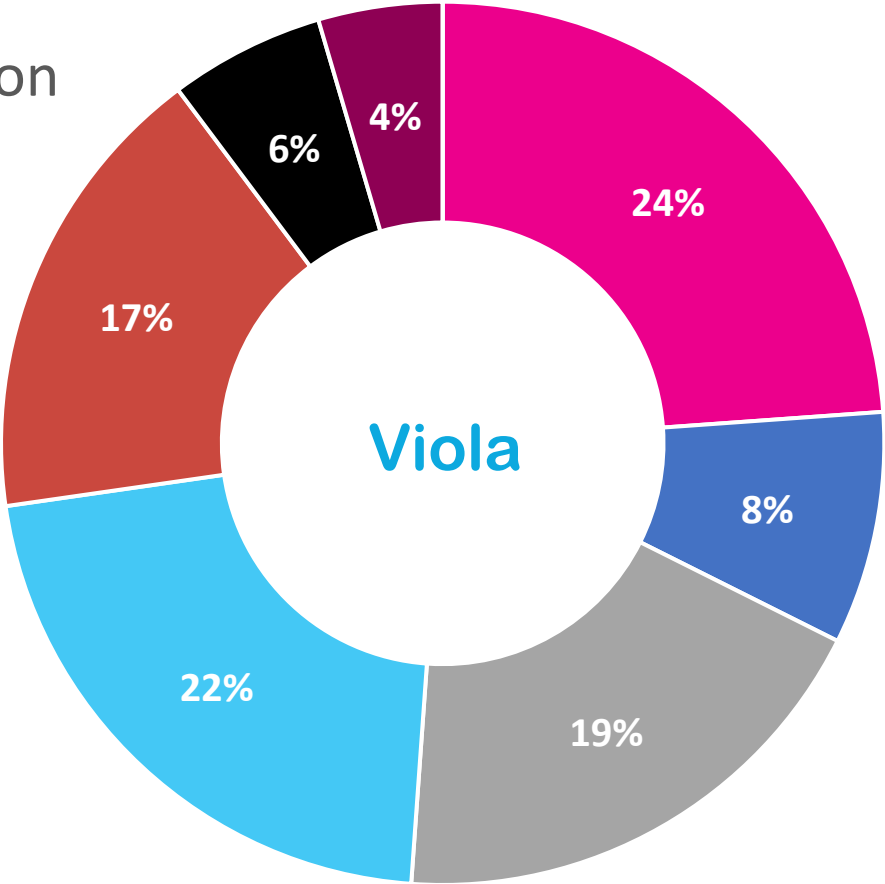

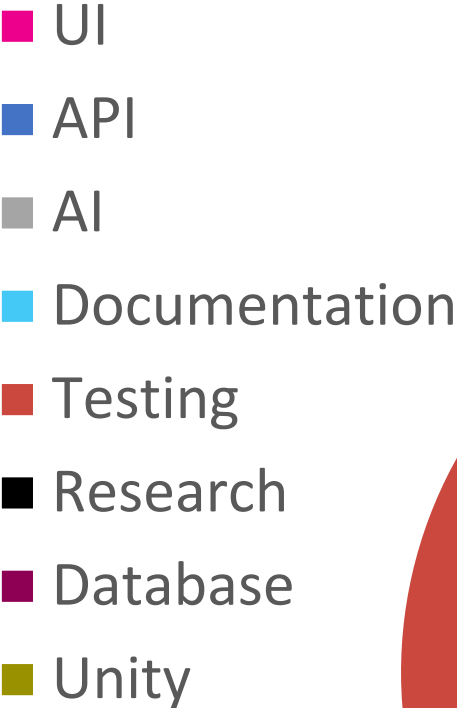

Give kids with certain limitations the opportunity to explore the world in an **immersive environment** with **the help of AI**.

Pitfalls and Solutions

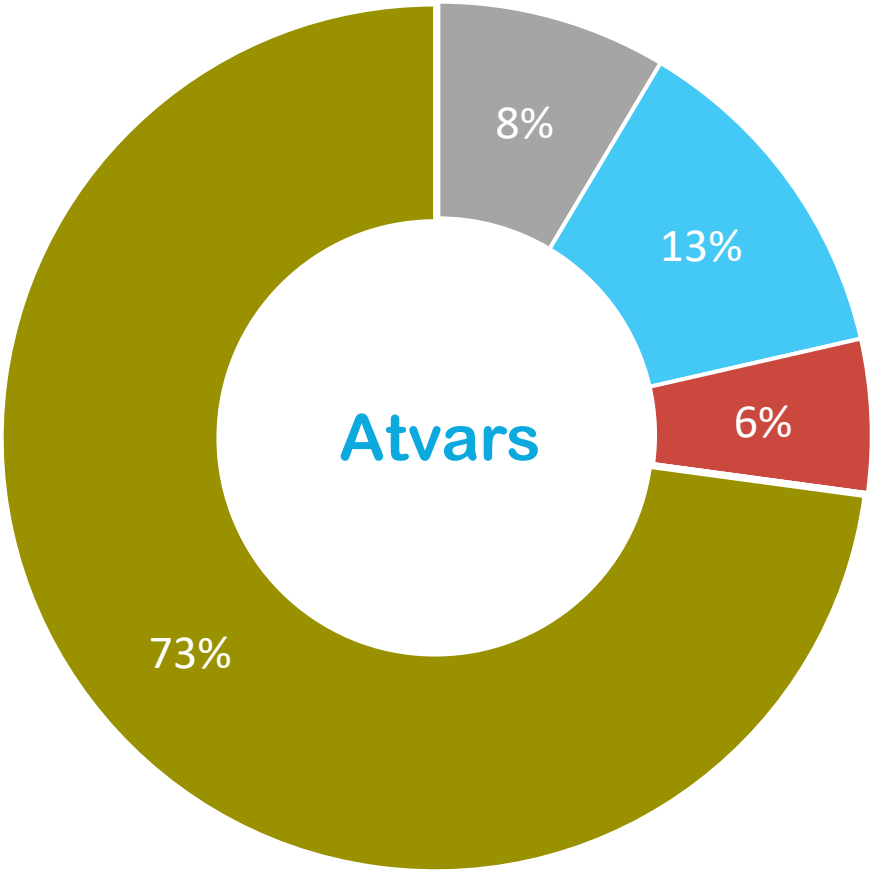

Pitfalls	Solutions
High cost	Free open source models
Long waiting time for a new image	Game during image generation
No reliability guarantee with AI-generated images	Changing the educational scope
No contact with the target audience	Open communication with the customer and a user testing with children

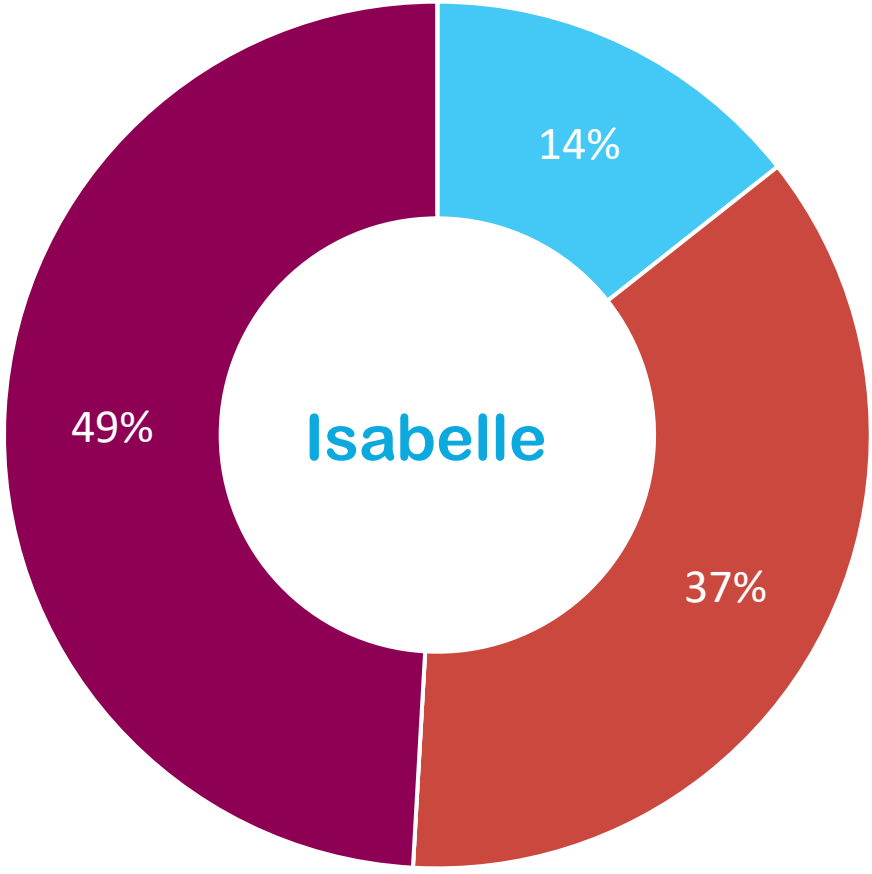

Time Tracking

176h

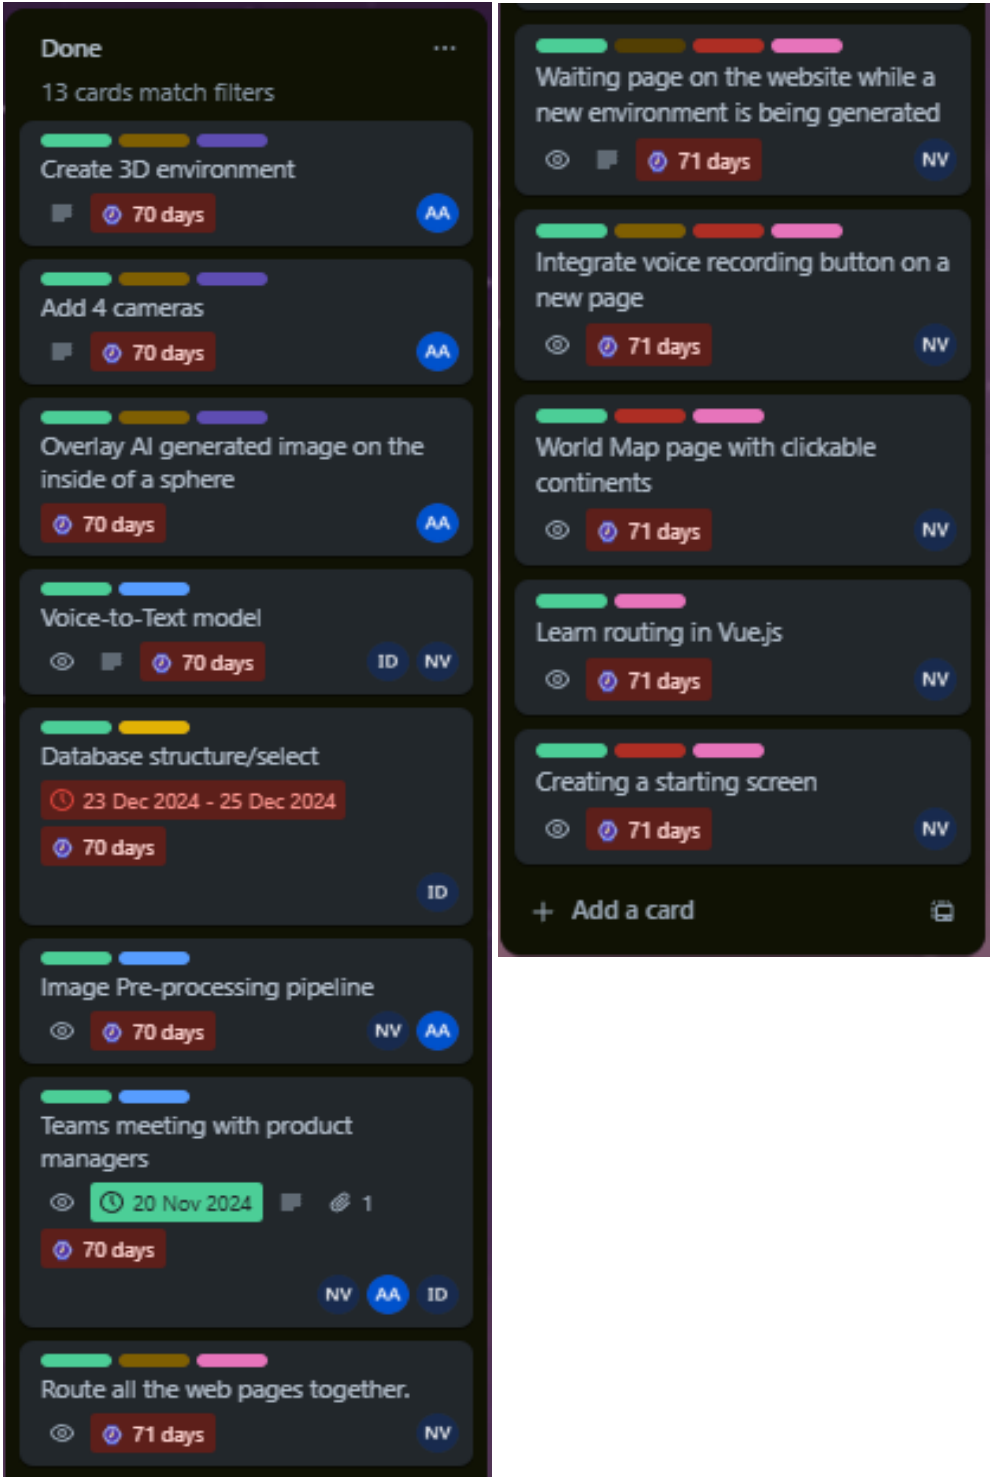

140h

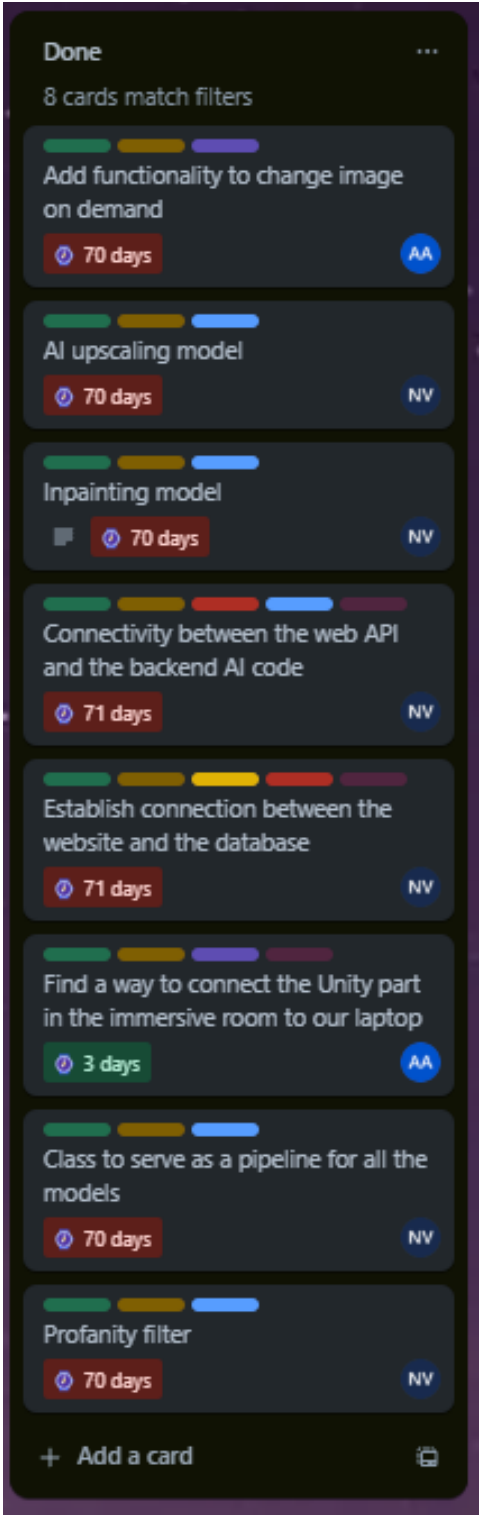

167h

Sprints

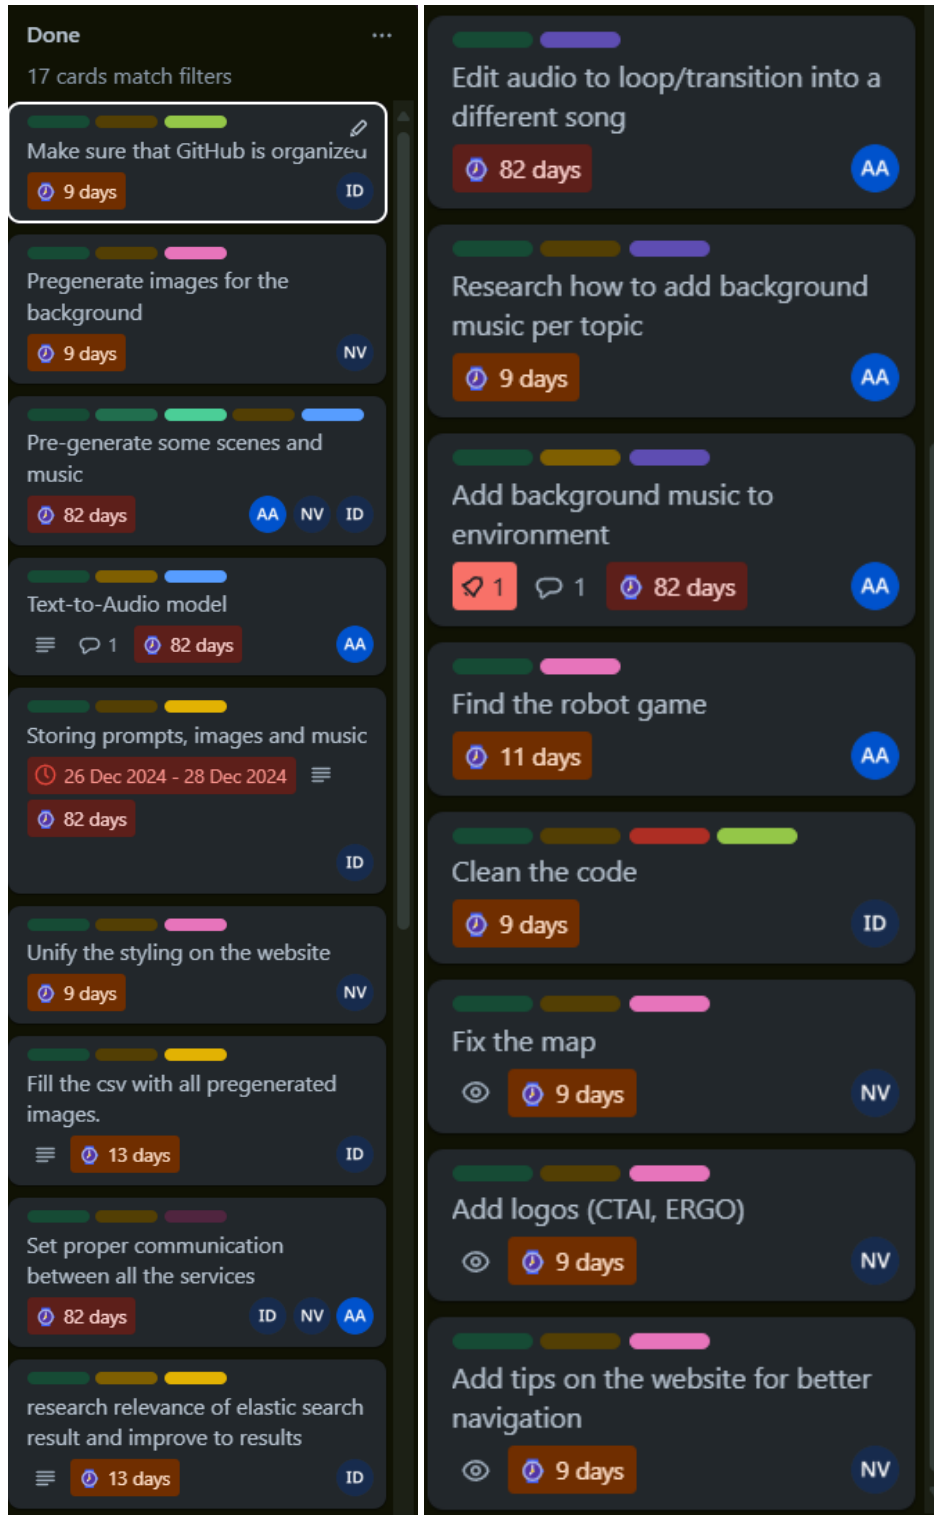

Done in Week 1

Done in Week 2

Done in Week 3

Retrospective

- Big Picture mindset
 - Great teamwork
 - Balanced distribution of work throughout the weeks
 - Most Nice-to-Haves were done
-
- Better preparation
 - Limited time in the immersive room
 - Few meeting with the client

Immersive Room

- Project's main feature
- Located in the Forum
- Displays the images
- Used to create the immersive experience

Website

- Interactive map for continent selection
- Voice input for prompting image generation
- Connection point for all parts of the project

Database

- Searching by the voice input and the continent
- Search techniques: Fuzziness, full-text search, relevance score filtering
- Images generated on spot are added immediately
- Endless interactivity

AI pipeline

- Text-To-Text: Google Gemma 2-2b-it
- Text-To-Image: CyberRealistic (Stable Diffusion)
- Inpainting: Absolute Reality (Stable Diffusion)
- Upscaling: Real ESRGAN
