Description

The following *User Manual* will explain how to use the website application for Virtual Globetrotter. The application needs to be properly set up as written in the **Installation Guide** before being shown to the end-user.

This manual will also feature tips and tricks on how to use the Virtual Globetrotter application to achieve the best results.

Disclaimer

Images generated by the Virtual Globetrotter have been generated by an artificial intelligence system. While we strive for accuracy and quality, please note that the content may not be entirely error-free or up-to-date. We recommend independently verifying the information you see. We do not assume any responsibility or liability for the use or interpretation of this content.

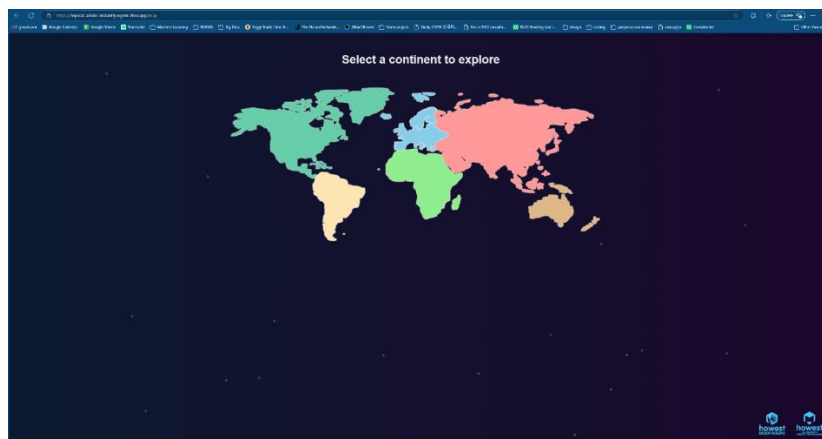

Tablet: Website navigation

Starting out

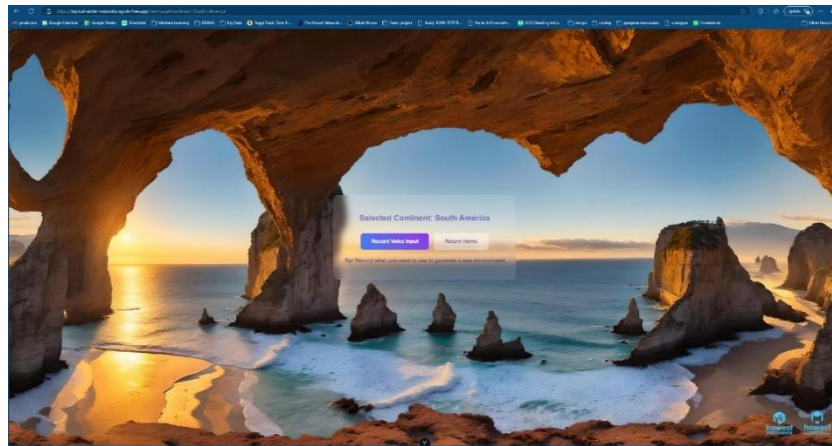

- Click on the “Start Exploring” button to start up the website.

Continent selection

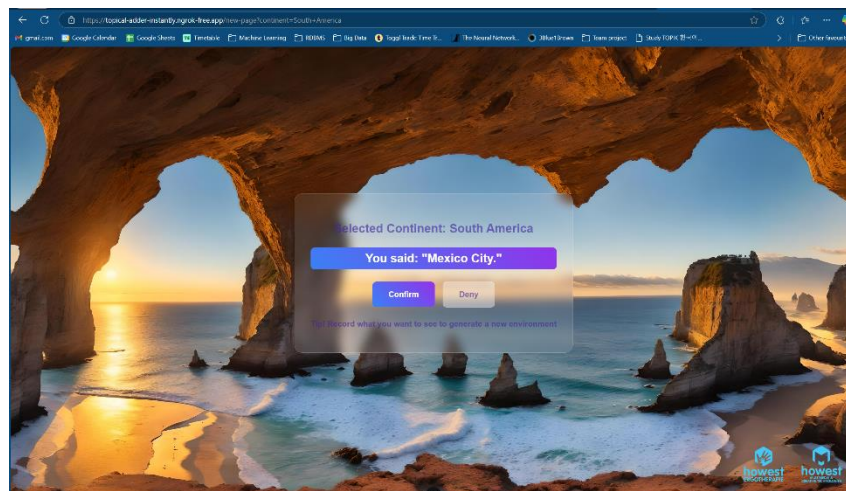

- Click on one of the continents to choose an area to explore. **The results will be influenced by the continent selection.**
- If the point of interest you want to explore does not belong to any of the continents (e.g. underwater images, space, etc.), you can click on empty space between the continents. That way you will select “Other” as your area of exploration.
- After clicking on the continent, you should see a new environment appearing in the immersive room that corresponds to the continent choice.

Optional: Voice input

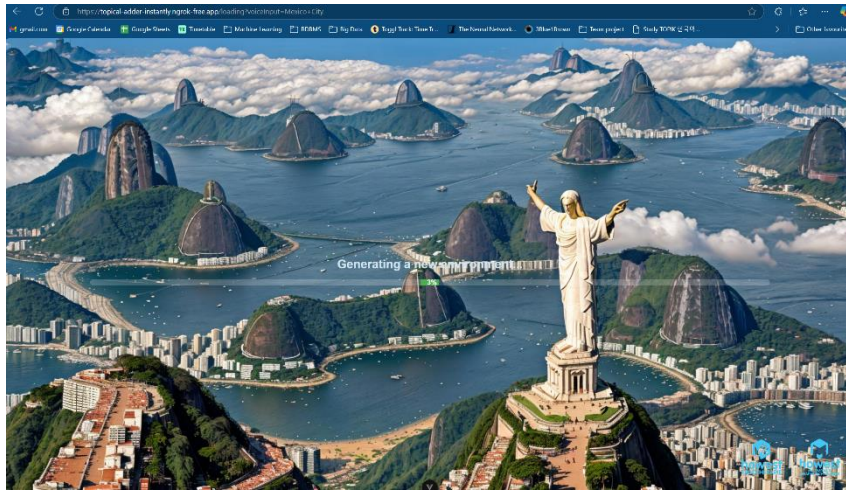

- Click on the “Record Voice Input” to generate a new environment in the immersive room based on what you said. **All the buttons are disabled until the speech recording is done.**
- Click on the “Return Home” to go back to the start screen.
- After your speech has been recorded, you can review if it was correctly transcribed:

- Click “Confirm” to start generation based on the voice transcript.
- Click “Deny” if your speech was not recorded correctly or if you changed your mind.

Waiting time:

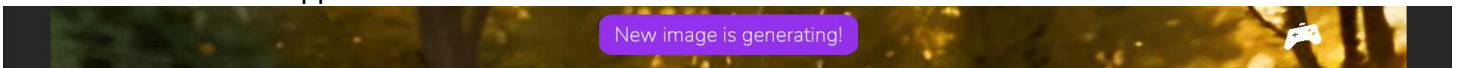

- After sending the voice input to generate a new image you might need to wait a bit. Waiting time is anywhere between couple of seconds to 2 minutes.

- After generating a new image, it will be displayed in the immersive room. You will be navigated to the page, where you can record a new voice prompt or go back to the start screen again.

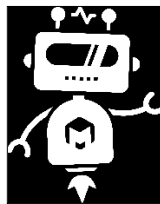

Immersive Room: Playing the robot minigame

When a new image is generating, on the top of one immersive room screen (directly opposed to the entrance), this text and icon will appear:

- Using the touchpad on the keyboard connected to the immersive room, click on the controller icon on the top right part of the screen to play a small game to pass the time.

The aim of this game is to find and click on small, white MCT robots scattered across each screen of the immersive room:

Three of those robots will be located on each immersive room wall.

Once you have found all of them, you will have an opportunity to play the game again.

Once a new image is generated, all the robots will disappear, and you won't be able to play the game again until a new image is generated.

Tips and Tricks:

- **Be very specific about what you want the application to generate.** For example: saying "Palm trees on a Hawaiian beach" will produce a better image than just saying "Hawaii".
- **The application is not good at generating people correctly.** Be aware that the images of people may be disturbing for little children.
- **Keep in mind that AI-generated images cannot accurately depict a historical place.**
- **Use descriptive adjectives and details.** Adding more descriptive words like "sunset," "vibrant," or "snow-covered" can help the AI generate more accurate and visually appealing images.
- **Experiment with different prompts.** If the first result isn't what you expected, try rephrasing your prompt or adding more details to guide the AI.
- **Understand the limitations.** AI models may struggle with complex scenes or abstract concepts. Simplifying your request can lead to better results.
- **Be mindful of ethical considerations.** Avoid generating images that could be harmful, offensive, or misleading. Always use AI responsibly.
